PROFILE SUMMARY

Motivated Flutter Developer with 1 year of professional experience at Al Shafaq Company in Saudi Arabia, developing and maintaining mobile applications using Flutter and Dart. Proficient in Flutter Widgets, Bloc State Management, Clean Architecture, API integration, and local databases including Hive and Sqflite. Demonstrated strong analytical and problem-solving skills through solving 80+ algorithmic challenges on Codeforces. Experienced in creating smooth and engaging user interfaces with responsive design principles and Lottie animations. Committed to writing clean, maintainable code and building high-quality mobile applications.

TECHNICAL SKILLS

- Programming Languages: Dart, Object-Oriented Programming (OOP)
- Frameworks & Libraries: Flutter Widgets, Custom UI Development, Lottie Animations
- State Management: Bloc, MVC, MVVM
- Architecture: Clean Architecture, Clean Code Principles
- API Integration: HTTP Networking, RESTful APIs, Firebase Cloud Firestore, Firebase Cloud Messaging (FCM), Stripe Payment Gateway, AI APIs (Image & Text Analysis)
- Local Databases: Hive, Sqflite, Shared Preferences
- Navigation: GoRouter
- Dependency Injection: GetIt
- Version Control: Git, GitHub
- Platforms: Google Play Store, Apple App Store
- Languages: Arabic (Native), English (Upper Intermediate — B2)

WORK EXPERIENCE

Applications Developer — Ashafaq Car Wash App | [Ashafaq Company, Saudi Arabia](#) | 2025 – Present

- Developed a mobile car wash application for the Saudi market, currently serving 8,000+ active users with over 3,000 completed wash requests in Riyadh.
- Designed and implemented the entire UI using Flutter with Bloc state management.
- Published the app on Google Play Store and Apple App Store; continue to maintain and release regular updates.

Applications Developer — Ashafaq Worker App | [Ashafaq Company, Saudi Arabia](#) | July 2025 – August 2025

- Built the worker-side application for Ashafaq Car Wash from scratch with support for 4 languages: Arabic, English, Hindi, and Bengali.
- Designed the workflow for workers to manage wash requests through five stages: Accepted, Arrived, In Progress, Completed.
- Internal-use application deployed exclusively to company workers handling customer requests.

Applications Developer — Ashafaq Branch App | [Ashafaq Company, Saudi Arabia](#) | January 2026 – March 2026

- Developed branch management application for Ashafaq Car Wash supporting 11 branches across Riyadh.
- Enabled branch managers to receive and process customer wash requests seamlessly.

Applications Developer — Food Delivery App (Syrian Market) | *Client Project* | *August 2025 – February 2026*

- Collaborated with a Syrian team based in Germany to develop a nationwide food delivery application targeting all provinces in Syria.
- Transformed Figma designs into a fully functional Flutter application with smooth, user-friendly interfaces.
- Implemented Clean Architecture principles for scalability and maintainability.
- Managed state with Bloc, integrated GoRouter for navigation, and applied GetIt (Dependency Injection) for modularity.
- Integrated Cloud Firestore for real-time data management and backend operations.

Applications Developer — Doctor Appointment Booking App | *Self-Project* | *October 2025 – January 2026*

- Developed a doctor appointment booking application with 10+ complex screens using Flutter and Hive.
- Integrated Lottie animations for smooth screen transitions and enhanced user experience.
- Implemented API integration for real-time operations (confirm/edit/delete appointments).
- Managed local data persistence with Hive for offline functionality.

Flutter Developer — ShamFix | Smart Home & Building Maintenance App | *Graduation Project* | *2025 – 2026*

- Developed ShamFix, a smart home & building maintenance Flutter application connecting clients with technicians, with two role-based experiences (Client and Technician) and a complete maintenance request lifecycle.
- Built a fully bilingual (Arabic/English) cross-platform UI with a splash screen featuring remote version checking via Firebase, onboarding flows, and dynamic service catalogs.
- Integrated AI-powered diagnosis allowing users to upload a photo or describe a fault in text; consumed AI APIs to automatically classify the issue, suggest the appropriate service, and auto-fill request data, with profanity detection on text input.
- Implemented an 8-stage order workflow (Pending, Estimate Price, Confirmed, Processing, Awaiting Final Approval, Completed, Rejected, Cancelled) with real-time status updates inside the app.
- Integrated Stripe Payment Gateway for online payments alongside a cash-payment wallet system, and delivered real-time push notifications using Firebase Cloud Messaging (FCM).
- Consumed RESTful APIs (Laravel backend) for all CRUD operations and built a technician dashboard with earnings, wallet, and geo-based order filtering by distance.

EDUCATION

Bachelor of Software Engineering — Yarmouk Private University

2021 – 2026 | *Graduated*

CERTIFICATIONS

- Flutter and Dart: Developing iOS, Android, and Mobile Apps — Coursera
- Advanced Flutter UI and State Management from Packt — Coursera
- English Level B1 Certificate — Blue Ocean Institute
- English Level B1+ Certificate — Blue Ocean Institute

KEY COMPETENCIES & SOFT SKILLS

- Strong problem-solving and analytical thinking (80+ algorithmic challenges solved on Codeforces).
- Cross-cultural communication and collaboration within distributed, remote teams (Saudi Arabia, Germany, and Syria).
- Teamwork and collaboration with designers, backend developers, and clients to deliver on shared goals.
- Adaptability, fast learning of new technologies, and effective time management across multiple parallel projects.
- Designing scalable, reusable UI components and writing optimized, maintainable code.
- Building secure applications with authentication and encryption.
- Translating Figma designs into production-ready Flutter applications.
